STOCKROOMS

HEAD OFFICE

ACCESSORIES

MEZZANINES AND PARTITIONING

Rackline has been installing in the retail sector for over thirty years, developing solutions for stockrooms, staff areas, head office sample and ideas rooms and even front of house shelving.

We're moving with the times with our retailers and responding to their needs to create more space in

stockrooms to allow for the change in customers' shopping expectations such as the growth in e-tail shopping impacting on click and collect areas within stockrooms and surrounding the till areas.

To make life easier we offer a free spaceplan and design service, site surveys and detailed quotation, we have a dedicated retail team with project management support and our own installation teams.

Our Rackline retail team includes:

**DEDICATED ACCOUNT MANAGER**

**PROJECT MANAGER**

**SITE SURVEY ENGINEERS**

# retail stockrooms

## static shelving

Rackline offer a range of static shelving systems for the retail stockroom, The main advantage with static shelving is that all bays are 100% accessible all of the time.

Retail stockrooms are forever changing whether it is seasonal changes, fashion changes or the fluctuation in terms of stockroom versus trading space - retailers need a range of products that are flexible enough to accommodate this.

Profile shelving is ideal for the storage of clothing and food products.

Profile consists of a single-skin panel with a double-formed rear section. It is a modular closed wall steel shelving system where the intermediate uprights support the shelves in the adjoining bays.

There are no sharp edges to the uprights and no possibility of stock migrating from bay to bay or becoming trapped behind upright posts.

Can be mounted onto a mobile base to increase storage capacity.

### ADJUSTABLE PROFILE SHELVING

- Easily adjustable with clips on 25mm increments
- Capable of storing weights of up to 90kgs with standard shelves.
- Extends to heights of 4.5 metres and 12 metres wide.
- A wide range of accessories are available including drawers, dividers and doors.

Ideal for larger and heavier items, also perfect for hanging garments.

Widespan is a longspan storage system capable of accommodating widths of up to 2.7 metres.

Widespan shelving has a wide range of beam profiles, easily adjustable shelf levels with a smooth front face.

As Widespan has no back braces, access is possible from both faces of a single entry bay. Eliminate the need for a double entry configuration and reduce the initial cost.

Can be mounted onto a mobile base to increase storage capacity.

### WIDESPAN SHELVING

- Extremely versatile.
- Capable of accommodating 1250kgs uniformly distributed load.
- Available in both chipboard and steel decks.
- Extends to heights of 4.8 metres and 2.7 metres wide.
- All shelves are adjustable on a 50mm pitch.

A low cost option for heavy, bulky items that will be hand-loaded onto the shelves. Can also be used for hanging garments.

Offers unrestricted access from all sides.

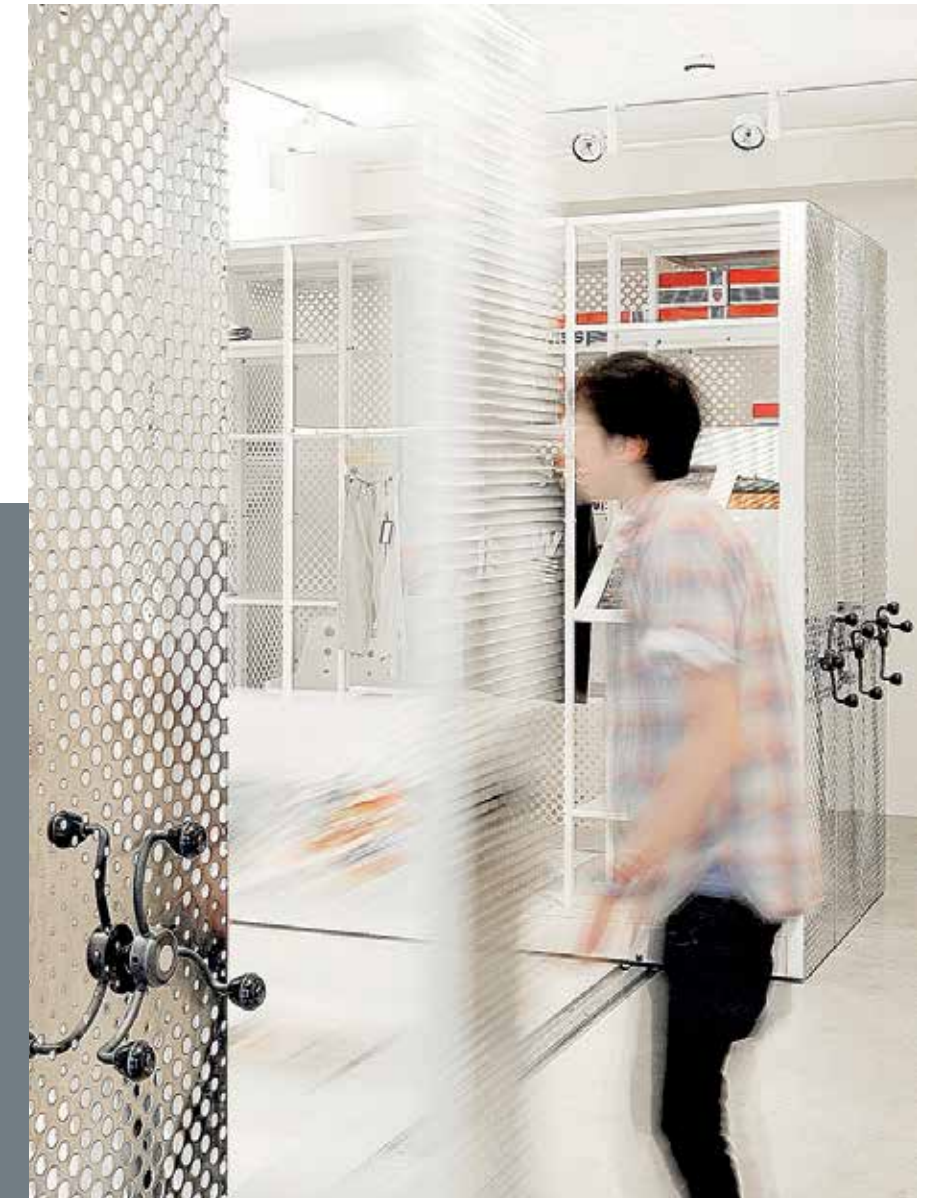

The Speedrax system incorporates steel post and beams to support chipboard shelves.

Can be mounted onto a mobile base to increase storage capacity.

### STOCKRAX SHELVING

- Low cost and simple to install.
- A wide range of size options available.
- A maximum shelf load of 700kg (UDL for a 1500mm wide load).

There are two mobile systems that are perfect for retail stockrooms.

Both of the systems can incorporate any of the shelving systems shown on the Static Shelving page.

Add colour and design features to the system with a full range of RAL colours and the opportunity of adding steel, laminate, wood, glass or vinyl end panels.

# retail stockrooms

## mobile shelving

Rackline offer a range of mobile shelving systems ideal for a busy stockroom environment.

Typically installing a mobile system can increase your storage capacity by 70% over conventional storage or reduce the area you need for storage to accommodate other areas such as shop floor.

### MONOTRAK

The Monotrak system is a unique high density mobile shelving system, very popular as it is designed to sit directly onto the floor without the need for a false floor and without trip hazards in the aisle.

The advantage of this system being surface mounted is that it causes little residual damage to the floor and can easily be resited.

### MULTITRAK

The Multitrak mobile system operates on the same principle of high density storage as Monotrak, but employs multiple torque tubes and wheels to accommodate longer bases and greater loads.

The Multitrak system is perfect when there is a requirement for very long mobiles or heavy weights as the mobile base can achieve 12 metres in length and loads of up to 15 tonnes per carriage which can be moved with ease.

# head office storage mobile shelving

As demand for shopping on line continues and customers look for a large variety of products the sample rooms and storage areas around the office working space becomes more and more important. Rackline has designed a range of products suitable for the storage rooms and sample areas that are both practical but also space saving.

## MONOTRAK

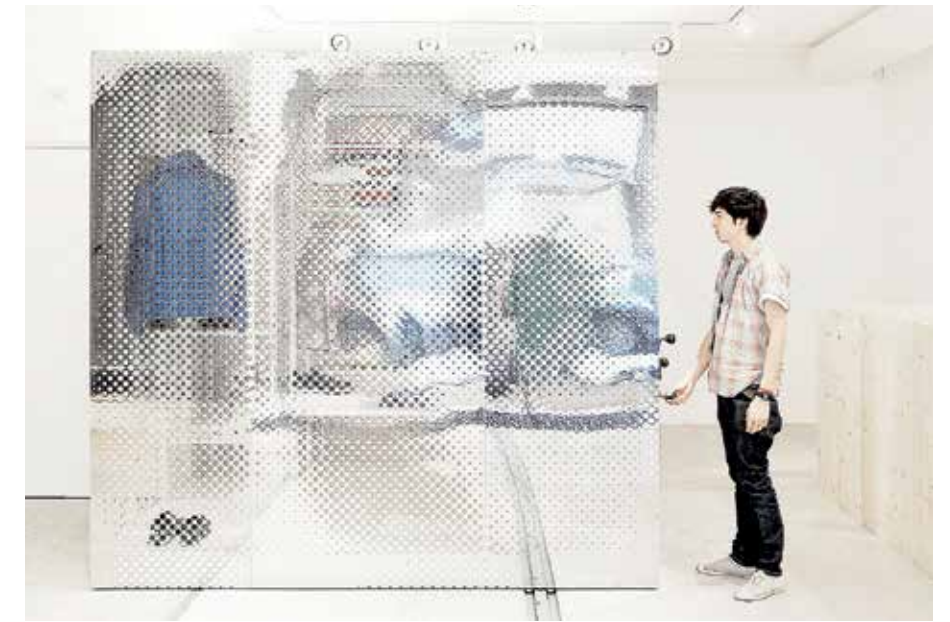

Rackline's Monotrak mobile system and low level Filestation products are very popular in the Head Office environment as they both amplify storage whilst maintaining an aesthetic finish.

There's a growing requirement to accommodate storage within a reduced footprint and allow more room for desks or design areas or increase the amount of storage that can be accommodated over conventional storage.

Mobile storage is ideal for Head Office stockrooms and for paper storage in the main office environment.

"The mobile system provided by Rackline has helped us contain all our current storage needs and much more with expansion that we are rapidly filling. By installing a mobile system we created space to accommodate our growing staff members. The installation was completed on time and within our budget allocation."

*Minnal Ladva, Executive Assistant, Pep&Co.*

## FILESTATION

- A low level high density storage product.
- Typically saves 33% more space compared to conventional storage.
- Includes a ThruTrak design to allow the system to sit directly onto the existing floor type.

Filestation is designed to replace conventional storage within the main office environment and is versatile enough to be used for filing, personal items or samples storage.

Its' low height allows it to suite into the surrounding furniture and ensure the office space remains open plan, by adding hanging rails, dividers, locker units and doors it can be personalised to your environment.

"With a complicated building programme, storage installation had to be organised around other contractors' work and in-store logistics. Rackline were extremely efficient in this regard, and the new storage facility has greatly enhanced our operational capability."

*Roy Massey, Facilities Manager, Marks & Spencer.*

# shelving accessories

creating flexibility

Rackline recognise that retailers often require a one stop shop purchase when it comes to fitting out stock areas, that is why we offer a range of supporting products that can be installed alongside the shelving systems featured within this brochure

This includes Mezzanine Floors and Partitioning, Office Storage and Lockers and general accessories for the shelving bays - hanging rails, doors, perforated shelves, louvered panels and spigots.

## LOCKERS

Rackline manufacture a competitively priced office locker range in a choice of sizes with a selection of colours and finishes.

## HANGING RAILS

Rails are available in a variety of widths and can include more than one rail in the depth and several in the height to suit the full range of garment storage.

## LOCKABLE DOORS

Roller, pin-hinge and glass doors are available in a variety of sizes.

## LOUVERED PANELS & SPIGOTS

Use panels and spigots to accommodate items such as shoes, handbags and general accessories.

## DRAWERS

Use drawers to store small items such as accessories and toiletries.

## MEZZANINE FLOOR & PARTITIONING

Split up a large space by adding a mezzanine floor and partitioning.
