

handles

□ Capstan

The CAPSTAN is recognised as a 'classic' design in mobile shelving systems and is Rackline's most popular handle. The design has evolved from nautical technology where the capstan was a mechanism for optimising maximum leverage around a central core, the same principle that applies to our systems. With its arching arms radiating from the central hub, the capstan is pleasing to the eye as well as extremely practical. In traditional black or retro stainless steel the capstan suits most environments.

□ Console

The CONSOLE is the 'designer' handle from Rackline. Developed with architects along aesthetic as well as practical lines, it is highly functional and pleasing to the eye. Manufactured in recyclable plastic and steel, it offers an integral lock giving inbuilt security. Appropriate for unheated environments, the material used in its manufacture are warm to the touch.

□ Tri-Arm

Rackline's latest design incorporating an integral plunger with manual or locking options, the TRI-ARM combines contemporary and classic designs.

Drawing on the multi spoke technology of the capstan whilst embracing the 'designer' look of the console handle, the tri-arm satisfies the requirement of most mobile shelving users.

Manufactured from recyclable plastics it is warm to the touch like the console. Its low profile design mean it is unobtrusive in systems where sleek lines are important and where space is at a premium.
