FRONT FACE.

IDEAL FOR RETAIL  
WHEN COMBINED  
WITH A HANGING  
RAIL.

Widespan is a longspan shelving system which offers the facility of either Steel or Chipboard Shelves on spans of up to 2.4 metres. Supported by either open or closed end frames.

- Widespan wide access bays ensure maximum shelf utilisation and optimum use of available storage space. The bolt-free construction means changing stock levels and type can be accommodated by quick and easy adjustment.
- As Widespan has no back braces, access is possible from both faces of a single entry bay - eliminating the need for a double entry configuration and reduce the initial cost.
- In environments where the need to maximise limited storage space has to be balanced with the facility to select and pick individual items, Widespan on mobile bases is the ideal solution.

## Widespan Shelving

Frame	Widespan
Height (mm)	1200, 1500, 1800, 2100 up to 3150mm (available in 50 increments)
